

FRESHWATER CAST · MONDAY CAST

Martin & Harris: Sunny Warm-Up, Tallapoosa Dawn Windows

Lake Martin · R.L. Harris / Wedowee (labeled callout) Fri Oct 2 – Sun Oct 4, 2026

bank / kayak / boat Highs ~82° → ~86° → ~89° (BMX) CT clocks · mostly fair warming midweek

Release boards thin at evening pull Soft recreational · no named trail event pulled

Martin and Harris draw a sunny late-September climb toward the upper 80s–90°. Pack sunscreen, fish Martin first light on points and pockets, and treat Harris / Wedowee as a labeled secondary stop when time and ramp status allow.

● MIDWEEK OUTLOOK

NWS Birmingham (BMX) band pin for **middle** paints this Friday–Sunday **Cast** window. At pull: A slight chance of rain showers between 10am and 1pm, then a chance of showers and thunderstorms. Mostly sunny. High near 86, with temperatures falling to around 82 in the afternoon. Southeast wind... Local clocks on this water run Central Time — dawn windows shift with the angler.

FRIDAY OCT 2

86°F slight chance rain showers then chance showers and thunderstorms · night ~69°F chance showers and thunderstorms. Winds 5 mph. Fish dawn and last light first when skies harden.

SATURDAY OCT 3

84°F showers and thunderstorms likely · night ~69°F showers and thunderstorms likely. Winds 0 to 5 mph. Fish dawn and last light first when skies harden.

SUNDAY OCT 4

74°F showers and thunderstorms · night
~66°F showers and thunderstorms. Winds 0
to 5 mph. Fish dawn and last light first when
skies harden.

HOW TO FISH THIS WEATHER

Unsettled air and shower/storm chances put
a premium on **pre-front and lull windows**.
Fish tighter to cover before cells; after a
pass, work muddy/clear seams and
windblown banks. Slide into creek arms if
lightning walks in.

Day cards from the locked weather-band representative pin (middle), pulled Friday morning for the
Fri–Sun window. Check live dam boards before you idle over a seam.

● GENERATOR SCHEDULE CHEAT SHEET

APC Tallapoosa public generation calendars were **thin as a full Fri–Sun unit block at evening
pull**. Confirm APC lake pages for Martin and Harris before you idle near dam-end structure.

REACH	FRI–SUN NOTE	FAILOVER
Lake Martin (hub)	Boards thin. Elevation and ramp status rule access. Soft recreational midweek.	APC Martin · public ramp boards
R.L. Harris / Wedowee (callout)	Labeled secondary. Boards thin. Confirm ramp before the hop.	APC Harris · public access notices

Soft bite notes with quiet releases: points, grass, brush, and docks early; deeper edges and shade mid-day. If
water is moving at a dam face, look for bait on the first legal current break — still outside every restricted line.
Confirm ramp status before you trailer when pool has been swinging.

Practical pre-launch check: elevation versus last trip, ramp status on agency or park pages, and a
glance at any release remark. Birds and bait on the graph beat an empty calendar.

● HOW TO FISH IT — BANK / KAYAK / BOAT

BANK

Primary public bank access through **Wind Creek State Park** on Lake Martin and posted day-use banks — fees, parking, and hours verify live. Harris / Wedowee banks only where posted as a labeled sister hop. Work points, riprap, and shaded pockets at first light.

Shared: hydrate; stay outside dam restricted lines on both lakes. Afternoon concrete gets hot fast — fish shade or quit to the truck.

Confirm park hours before you lock the truck. Soft midweek pressure until sunny Wednesday — leave margin before recreation stacks popular Martin ramps.

KAYAK

Launch at the named public ramp when open; confirm ramp and parking before you strap the boat. Fish creek arms, grass flats, or protected banks away from main-channel ski traffic after mid-morning.

Wind on open water can end a kayak day early once recreational traffic builds — have a bailout shoreline planned. PFD on, whistle, and a sun kit every trip.

Pack a short rod for tight cover and a longer spinning setup for point casting. On the warmest Wednesday afternoon, abort open fetches early and finish along a protected bank rather than fighting wakes back to the ramp.

BOAT

Plan: **first light--~9 AM CT** on Martin points and docks; late morning shade; mid-day deeper breaks with electronics. Launch early at Wind Creek State Park when open — confirm ramp status before you trailer.

Soft APC language only when boards show units.

Soft midweek pressure; sunny Wednesday traffic rises near popular Martin ramps. Mark bait height at dawn. Harris is a secondary hop only if time allows.

Fish Martin thoroughly rather than forcing a two-lake hop. If Wednesday wakes stack, finish in a protected pocket.

● LURE BOX

TOP

Walking bait bone/chrome at dawn on points. Poppers over grass or brush on slick mornings. Buzzbait black/blue along shady banks evenings.

MID

Spinnerbait white/chartreuse on windy points. Squarebill citrus on riprap and docks. Soft swimbait for suspended fish mid-day.

BOTTOM

Green pumpkin creature in grass/brush. Brown football jig on point drops. Drop-shot shad pattern when water is clear under high sun.

● BASS LIFE STAGE

Late September on the Tallapoosa lakes is a post-summer transition. Largemouth still relate to points, docks, and pockets; spotted bass soft language on main-lake structure when bait is up.

Spawning is long done. Fish feed and comfort one morning at a time — cool nights pull fish shallow at first light; warm afternoons push them to shade and depth. Handle quickly in warm water.

● FORAGE THIS WEEK

Most likely menu: threadfin shad on points and creek mouths, bluegill around docks. Hatch reports are thin. Match the graph and birds.

● ALSO HOT / ALSO IN SEASON

Crappie on brush and docks. Catfish on deeper holes. Soft spotted-bass language on clear main-lake points.

Crowd / Heavy Traffic: No named national trail event pulled for this water Mon Sep 28 – Wed Sep 30. Soft midweek recreational pressure under sunny skies; traffic rises on the warmest afternoons. Regs confirm live before you keep fish.

Looking ahead (next 1–3 weeks): Cooler October nights often sharpen dawn topwater on Martin. Keep pulling APC elevations. Next **Cast:** Friday window Fri–Sun.

● PATTERN NOTES (THIS WEEK)

Late September on this water is still a feed-and-comfort game. Cooler nights pull fish shallow at first light; the afternoon rebound pushes them to shade, docks, grass edges, and deeper breaks unless generation moves bait into a legal current seam.

Start every morning by marking bait height on one trusted piece of structure before the first cast. If bait is up, open with a walking bait or spinnerbait; if bait is down, open with a jig, Texas-rig, or soft swimbait on the break. That single fork saves wasted hours chasing last week's memory.

When generation calendars stay thin, treat birds, bait on the graph, and ramp status as your live board. Soft unit language only when pages show water moving — and even then, fish outside every restricted line.

Crowd picture for Mon Sep 28 – Wed Sep 30: soft midweek recreational pressure under mostly sunny skies, rising on the warmest Wednesday afternoon. Get the dawn hour, then leave a margin before wakes and ski traffic stack popular corridors.

Regs, ramp fees, and park hours confirm live before you keep fish or lock the truck. This Cast is a plan for the water — not a substitute for the agency page you should glance at the night before.

● MARTIN–HARRIS MIDWEEK NOTES

This product covers Lake Martin with Harris as the labeled sister when time allows. If you only have one morning, fish Martin thoroughly rather than burning daylight on a forced two-lake hop.

Check color at the ramp and match lure color under Wednesday's sun. Electronics tip: mark bait height on a known point or pocket at dawn.

Soft APC language only when boards show units. Stay outside dam restricted lines on both lakes. Soft midweek pressure; sunny Wednesday traffic rises near popular Martin ramps.

Monday's cooler morning is the cleanest topwater window. Tuesday–Wednesday warm — shorten shallow and rotate to docks, shade, and deeper breaks by late morning.

Carry a dedicated topwater rod for dawn and a finesse setup for clear high-sun water.

Mental picture: sunny dawn points early in the week, then a warmer Wednesday shade bite with more recreational traffic after mid-morning.

If Wednesday opens calm, walk a bone bait down the first clean point; if chop builds, start spinnerbait on the windward edge and save the walker for a lee pocket.

Harris is a secondary hop only if time and ramp status allow. Primary is largemouth / spotted bass on points and docks; crappie stay short also-notes.

● ON THE WATER THIS WINDOW

Treat dawn as the whole trip on the warmest days of this window. A clean first hour on a point, grass edge, seam, or creek mouth beats three hours of high-sun wandering.

Soft generation boards mean you fish structure and bait first; if water is moving at a dam face later, look for bait on the first legal current break — still outside every restricted line.

Decision fork: calm slick mornings open with a topwater or walking bait on the first clean bank you trust; breezy or wake-chop mornings open with a spinnerbait or soft swimbait along the windward edge, then rotate to shade. That fork covers most of this Cast without overthinking the box.

Primary this week is largemouth and spotted bass on points and docks. Secondary species stay short also-notes only.

Confirm elevation vs last trip before you trailer. Birds and bait on the graph beat an empty calendar. Next Cast looks at the Friday window Fri–Sun with a fresh pull.

● WINDOW DISCIPLINE

Leave time margin for the ramp and the drive. Soft midweek pressure evaporates once afternoon recreation stacks popular corridors — especially on the sunny Wednesday rebound. Get the dawn hour right, then leave while the fishing is still good.

Practical pre-launch check: elevation vs last trip, ramp status on agency or park pages, and a glance at any release remark. Birds working a flat at dawn are the best free tip when calendars stay thin.

Hydrate early. Clear late-September sun puts UV and glare up after 9 AM — polarized lenses and longer casts help once surface glass burns off. Keep a rain shell even on fair midweek cards; looking ahead into Thursday can still bring storms on some corridors.
