HOW TO FISH THIS WEATHER

MORNING

- Shallow cover, points, creek mouths
- **First light (7:47 AM EST) → ~9 AM**
- Use any ripple as cover

MIDDAY

- Shade lines, docks, deeper edges
- Electronics for bait height first
- Slow down once the sun is overhead

EVENING

- Revisit shallow shade as sun drops
- Topwater if the surface lays down
- Weekday traffic is lighter — work quiet pockets

FALL TRANSITION **Smallmouth plan: Go subsurface and a notch slower: edges of drop-offs, rocky points and bluff ends between the fall flats and the 20-40 ft winter depth; jerkbait with pauses, small jig or hula grub on the bottom, blade bait ripped off the bottom on points.**

BIOLOGY

BASS STAGE

Smallmouth are in the late fall transition — water in the low-to-mid 50s, so they are staging on drop-off edges, points and bends between their summer spots and the deep wintering holes.

Basis: estimated water ~50°F — 75-day observed air record (NOAA ACIS) lagged for a lake (14-day response); no water-temperature

NATURAL FORAGE

Ned / small shaky head — cold dawn when fish will not chase Small crankbait in shad or craw — first break off points. Soft creature bait for shady wood on the warm-up.

ALSO BITING

Yellow perch & walleye (bonus). Cool nights can pull perch and any walleye tighter to nearshore breaks and harbor structure.

PRESSURE

Weekday traffic — lighter than the weekend. Fish early, give ramps and swim areas room.

WATER BOARD — LAKE CHEAT SHEET

FIXED Natural / small-impoundment water — no generation table. Check access rules and level notes with the managing agency before you go.

ITEM	NOTE	SOURCE
Clarity	Natural greens and browns match stained shore water; flash gets the nod on the windblown bank when baitfish are pushed shallow.
