FRESHWATER CAST · MONDAY CAST NORTH CAROLINA

## Falls Lake: Midweek Pattern, Local Boards & Largemouth / spotted bass

Falls Lake · Mon Sep 21 – Thu Sep 24, 2026 · bank / kayak / boat · times ET

Mon–Thu Sep 21–24 · ET

Largemouth / spotted bass

USACE Wilmington

Soft recreational

The week still fishes if you respect wind, boards, and bait — pack a rain shell when midweek storms show, and let largemouth / spotted bass tell you when the fall transition actually clocks in on Falls Lake.

### ● MIDWEEK OUTLOOK

NWS point guidance for Falls Lake keeps the Monday Cast window (Mon Sep 21 – Thu Sep 24) in a late-summer pattern that still rewards dawn and dusk first. All clock times below are **ET**. Read the day cards as a working plan, then re-pull the live NWS point forecast before you trailer — numbers below are from the Sunday research pull and can change.

**Through the week:** - Mon 21: High ~89°F, mostly sunny then 30% T-storms after 2pm; calm - Tue 22: High ~82°F, showers (~80%) afternoon/eve; NE ~5 mph - Wed 23: High ~69°F, showers likely (~70%) - Thu 24: High ~68°F, 50% showers; low ~56°F Thu night

**Pattern note:** Obs pressure nearby:\*\* Nearby KRDU ~29.93 in (Sun afternoon)

For Largemouth / spotted bass: lean first light and last light while heat or wind is the story, then fish wind-blown banks, points, and any confirmed current seams once the day settles. By Wednesday–Thursday, cooler or calmer air (where forecast) should widen the morning window. Clarity unconfirmed lake-wide — trust what you see at the ramp. Soft recreational pressure this Cast window. Never invent boat counts or trail names. Additional NWS detail from research: Mon 21: High ~89°F, mostly sunny then 30% T-storms after 2pm; calm Tue 22: High ~82°F, showers (~80%) afternoon/eve; NE ~5 mph Wed 23: High ~69°F, showers likely (~70%) Thu 24: High ~68°F, 50% showers; low ~56°F Thu night

#### **MONDAY SEP 21**

- Mon 21: High ~89°F, mostly sunny then 30% T-storms after 2pm; calm

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

#### **TUESDAY SEP 22**

- Tue 22: High ~82°F, showers (~80%) afternoon/eve; NE ~5 mph

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

#### **WEDNESDAY SEP 23**

- Wed 23: High ~69°F, showers likely (~70%)

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

#### **THURSDAY SEP 24**

- Thu 24: High ~68°F, 50% showers; low ~56°F Thu night

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

## ● GENERATOR SCHEDULE CHEAT SHEET

Live operator language for **Falls Lake** (USACE Wilmington). Times and elevations below are from the Sunday research scaffold — **verify dam boards before you go (ET)**. Do not invent unit counts, CFS, or midnight targets that were not posted.

| WATER                                    | SUNDAY OBS<br>(RESEARCH) | SCHEDULE / OPERATIONS                                                                                        | GUIDANCE                                                                                                                                                                         |
|------------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Falls Lake</b><br>USACE<br>Wilmington | elev ~**247.5<br>ft      | Mon–Thu generator / release<br>blocks often post late — re-<br>check after evening update /<br>before launch | Predicted values only when operator<br>posted — otherwise honest re-check.<br>Failover: operator lake page / district<br>phone if published. Schedules change<br>without notice. |

Operator: USACE Wilmington District (Falls Dam). Levels (sourced): Provisional Falls Dam HW elev ~247.5 ft NGVD29 mid–late Sep 16–17 rows in dssfalls.txt; outflow often ~93 cfs in sampled hours (provisional). Re-pull latest rows at assemble. Generator schedule language: Low continuous outflow typical in sampled window; not a peaking hydro schedule like Kerr. Confirm live USACE Falls product. Sources: <https://epec.saw.usace.army.mil/dssfalls.txt> · <https://epec.saw.usace.army.mil/>

Soft current→bite only when generation / release is the story. Dam restricted zones always off-limits. If boards show Sunday-only at pull, treat Mon–Thu as not yet posted and pull again evening-before or ramp-side.

## ● HOW TO FISH IT — BANK / KAYAK / BOAT

### BANK

Shared: hydrate early; midweek storms mean a lightning abort — leave the bank. Dam/restricted water always off-limits. USACE Wilmington public recreation banks and ramp shoulders where bank fishing is posted — fees and gate hours verify live. Fish first light and last light ET on points, riprap, weed edges, and creek-mouth seams. Largemouth on riprap and creek mouths; louder profiles after rain stain. Soft weekday recreational unless Heavy Traffic names an event. Give other bank anglers room on short shoulders. Pack a rain shell when midweek cells are in the forecast; never invent boat counts.

### KAYAK

Falls Lake kayak plan: launch at public ramps with kayak-friendly shoulders; work lee shores when main-lake or open-fetch wind rises. PFD on — whistle recommended on big water. Stay out of dam restricted zones; soft plastics keep bass in the zone without long casts into timber. Soft plastics, jigs, and compact swimbaits keep fish in the strike zone without long casts into timber or rocks. Leave a weather margin midweek; do not paddle open water into cells. Soft recreational — still yield in narrow cuts.

### BOAT

Plan: first light—~9 AM ET shallow points / riprap / creek mouths; midday graph bait on breaks and channel swings; evening revisit shade or wind seams. Idle clear of blast-off lanes if a club event appears. Re-check operator lake / generation boards before launch — no invented unit counts. Soft recreational unless Heavy Traffic says otherwise. Trailer first for lightning. Lead the day for the primary species named above — water-first, not a national paste.

## ● LURE BOX

Lead the box for **Largemouth / spotted bass**. Stained water: louder / chartreuse profiles. Clearer: natural shad / green pumpkin.

### TOP

Walking bait / popper at dawn

Buzzbait on cloudy storm edges

Whopper-style over grass if present

### MID

Spinnerbait / chatterbait if stained

Squarebill on riprap

Swimbait / underspin on bait

### BOTTOM

Jig / soft craw

Texas-rig worm

Ned on clearer banks

## ● BASS LIFE STAGE

**Primary species this week:** Largemouth / spotted bass — water-first.

Bass life stage (late Sep — seasonal, not a dated creel survey): Early fall transition. Surface temps typically start easing after summer peaks; fish begin relating more to baitfish (threadfin/gizzard shad) moving toward creek arms/points at first cool snaps. Still some summer ledge/main-lake holdovers on deep reservoirs until sustained cool nights. If thin local reports: say so and fish the transition playbook (shad-imitating reaction baits + morning topwater). What's on the menu: Most likely threadfin/gizzard shad + bluegill/sunfish on banks; crawfish still a secondary. Thin on dated forage reports this pass — label as seasonal most-likely, not a verified hatch.

**What's on the menu:** Most likely young-of-year baitfish and lake-typical forage (shad / herring / perch / bluegill analogs by water). Thin on dated 2026 stomach-content reports this pass — seasonal most-likely only. Match lure size to the bait you see.

Life-stage language is seasonal, not a creel survey. If fish are locked deep on bait, follow electronics; if they are chasing on top at first light, stay shallow until the sun climbs.

## ● ALSO HOT / ALSO IN SEASON

**Secondary chase on Falls Lake:** Crappie; catfish; white perch/panfish. (Regs: live-link NCWRC only — do not invent.)

**Crowd / Heavy Traffic:** In Cast window: No named trail event pulled for Falls Lake Sep 21–24, 2026. Looking ahead: No Falls Sep/Oct 2026 event confirmed in pulled FOM/Elevate calendars this pass. Sources checked: FOM NC Central · Elevate Outdoors · ncbassfishing.com Never invent boat counts. Soft recreational still means give rentals, pontoons, and bank anglers room.

**Primary reminder:** Lead the week for Largemouth / spotted bass — water-first, not a national paste. Regs live-link only (state wildlife agency creel & size limits). Reciprocal / border waters: confirm live; do not invent sister-state rules.

**Looking ahead (next 1–3 weeks):** Same Piedmont cool-down. No sourced trail events next 1–3 weeks this pass. Watch for bait pushes into creek backs and less reliance on pure midday heat as nights ease. Keep pulling live elevations / lake pages. Next Cast product: Friday window Fri–Sun (ET).

Panfish and catfish remain seasonal options where the lake supports them — early-fall brush and deeper channel swings on warm nights early-week. White bass / hybrids (where present) often show on wind or current seams when bait compresses. Smallmouth (where the lake holds them) reward clean rock and current edges when wind sets up. If a club or permitted tournament appears on a look-ahead calendar, treat ramp density as Heavy Traffic even when the species focus is walleye or multi-species — boat wakes and blast-off lanes still matter.

Weather look-ahead stays subordinate to the live NWS point forecast: cooler mornings widen the bite window; post-storm mudlines can fire then shut off. Pack a rain shell when midweek storms are in the forecast. Hydrate early-week heat. Clarity, boat traffic, and bait location will tell you more at the ramp than any Sunday scaffold — use this Cast as a plan, not a guarantee.

## ● ETHANOL-FREE FUEL NEAR THIS WATER

Current **E0** (ethanol-free) identity from Pure-Gas.org as of the Sunday research pull (ET). Prices may change; verify octane and price at the pump. Call ahead — availability changes.

- **E0** — 0.8 mi — Rolling View Marina (UNBRANDED), 3940 Falls Lake Rd, Durham NC — listed E0 octane(s): 89; tel 919-596-2194 [Pure-Gas id 14537]
- **E0** — 3.0 mi — Quality Food Mart (EXXON), 4601 Durham Rd, Raleigh NC — listed E0 octane(s): 87; tel 919-809-8849 [Pure-Gas id 41031]

- **E0** — 5.2 mi — Billy'S Mart (BP), 3834 Cheek Rd, Durham NC — listed E0 octane(s): 90; tel 919-683-6300 [Pure-Gas id 45210]
- **E0** — 7.9 mi — Harris Teeter (KROGER), 8056 T W Alexander Dr, Raleigh NC — listed E0 octane(s): 90; tel 919-596-5399 [Pure-Gas id 47806]

Listed **E0** only. Crowdsourced Pure-Gas listings — not a pump guarantee.

### ● **HEAVY TRAFFIC**

In Cast window: No named trail event pulled for Falls Lake Sep 21–24, 2026. Looking ahead: No Falls Sep/Oct 2026 event confirmed in pulled FOM/Elevate calendars this pass. Sources checked: FOM NC Central · Elevate Outdoors · ncbassfishing.com

## ● LOOKING AHEAD

Same Piedmont cool-down. No sourced trail events next 1–3 weeks this pass.

Next Cast: Friday window Fri–Sun. Keep pulling live lake pages and trail calendars 1–3 weeks out.

## ● RAMP-TO-DARK CHECKLIST

- **Boards:** Re-pull operator lake / district pages the evening before and again at the ramp — Sunday research ages fast.
- **Sky:** Live NWS point forecast + radar; lightning means trailer first, every time.
- **Fuel:** Confirm **E0** still on the Pure-Gas listing and price at the pump — no invented prices.
- **Crowd:** Soft recreational still yields to rentals, pontoons, and bank anglers; named Heavy Traffic overrides the soft call.
- **Species:** Lead the day for the primary named above — water-first, not a national paste.
- **Exit:** Leave a weather margin on storm days; do not fish restricted dam water.

## ● FOUR-DAY FISHING PLAN

Use this as a Mon–Thu working script, then adjust to live boards and sky:

- **Monday:** First light on windward points and riprap; midday graph bait on breaks; evening revisit shallow shade. Soft recreational opener.
- **Tuesday:** If wind builds, fish mudlines and lee pockets rather than fighting whitecaps. Keep a storm abort plan if NWS cells are active.
- **Wednesday:** Often the unsettled day — shorter morning window, then trailer before storms. Post-cell mudlines can fire briefly; lightning still ends the day.
- **Thursday:** Clean-up day when skies improve — widen the morning window, cover water thoroughly, and note any look-ahead Heavy Traffic for the weekend.  
Primary species leads every day — do not force a national bass paste on a water-first primary. Re-check operator pages and Pure-Gas **E0** before you trailer.

## ● SOURCES

NWS point forecasts for the pin · USACE Wilmington lake / district pages · trail calendars when a named event was pulled · Pure-Gas.org public **E0** listings · Freshwater Cast gold standard (TN River AL Chain Monday Cast reference). Schedules change — verify dam boards before you go.
