FRESHWATER CAST · MONDAY CAST NORTH CAROLINA

High Rock Lake: Midweek Pattern, Local Boards & Largemouth bass

High Rock Lake · Mon Sep 21 – Thu Sep 24, 2026 · bank / kayak / boat · times ET

Mon–Thu Sep 21–24 · ET

Largemouth bass

Cube Hydro Yadkin

Check Heavy Traffic

The week still fishes if you respect wind, boards, and bait — pack a rain shell when midweek storms show, and let largemouth bass tell you when the fall transition actually clocks in on High Rock Lake.

● MIDWEEK OUTLOOK

NWS point guidance for High Rock Lake keeps the Monday Cast window (Mon Sep 21 – Thu Sep 24) in a late-summer pattern that still rewards dawn and dusk first. All clock times below are **ET**. Read the day cards as a working plan, then re-pull the live NWS point forecast before you trailer — numbers below are from the Sunday research pull and can change.

Through the week: - Mon 21: High ~89°F, 30% T-storms after 3pm; calm - Tue 22: High ~82°F, showers (~80%) afternoon; calm early - Wed 23: High ~69°F, showers likely (~60%) - Thu 24: High ~68°F, 30% showers before 2pm; low ~57°F **Pattern note:** Obs pressure nearby:** Nearby KEXX ~29.94 in (Sun afternoon)

For Largemouth bass (stripers also in mix): lean first light and last light while heat or wind is the story, then fish wind-blown banks, points, and any confirmed current seams once the day settles. By Wednesday–Thursday, cooler or calmer air (where forecast) should widen the morning window. Clarity unconfirmed lake-wide — trust what you see at the ramp. ****In Cast window:**** No High Rock named trail event pulled for Sep 21–24, 2026. ****Looking ahead:**** FOM Piedmont 2026 list showed High Rock dates earlier in season; no Sep 21–Oct mid High Rock event con. Never invent boat counts or trail names. Additional NWS detail from research: Mon 21: High ~89°F, 30% T-storms after 3pm; calm Tue 22: High ~82°F, showers (~80%) afternoon; calm early Wed 23: High ~69°F, showers likely (~60%) Thu 24: High ~68°F, 30% showers before 2pm; low ~57°F

MONDAY SEP 21

- Mon 21: High ~89°F, 30% T-storms after 3pm; calm

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

TUESDAY SEP 22

- Tue 22: High ~82°F, showers (~80%) afternoon; calm early

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

WEDNESDAY SEP 23

- Wed 23: High ~69°F, showers likely (~60%)

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

THURSDAY SEP 24

- Thu 24: High ~68°F, 30% showers before 2pm; low ~57°F

Best bite: first light~9 AM ET; re-check boards before midday plan

Abort for lightning; hydrate on warm days

● GENERATOR SCHEDULE CHEAT SHEET

Live operator language for **High Rock Lake** (Cube Hydro Yadkin). Times and elevations below are from the Sunday research scaffold — **verify dam boards before you go (ET)**. Do not invent unit counts, CFS, or midnight targets that were not posted.

WATER	SUNDAY OBS (RESEARCH)	SCHEDULE / OPERATIONS	GUIDANCE
High Rock Lake Cube Hydro Yadkin	Elevation — re-check live board	No fixed angler generation calendar — system / reservoir operations; soft current→bite only	Predicted values only when operator posted — otherwise honest re-check. Failover: operator lake page / district phone if published. Schedules change without notice.

Operator: Cube Hydro Carolinas (Yadkin Project — High Rock Dam). Levels (sourced): Cube lake levels page High Rock 651.26 ft (3.74 ft below full pond) as of 9/20/2026 5:00 PM. Generator schedule language: Cube publishes levels / discharge records; no fixed public hourly “generation schedule” for anglers. Sep minimum project outflow context historically 1,000 cfs unless LIP/emergency — confirm live Low Inflow Protocol status on Cube site. Sources: <https://ww4.cubecarolinas.com/lake/levels?orgID=3> · <https://cubecarolinas.com/lake-levels/> · <https://cubecarolinas.com/low-inflow-protocol/>

Soft current→bite only when generation / release is the story. Dam restricted zones always off-limits. If boards show Sunday-only at pull, treat Mon–Thu as not yet posted and pull again evening-before or ramp-side.

● HOW TO FISH IT — BANK / KAYAK / BOAT

BANK

Shared: hydrate early; midweek storms mean a lightning abort — leave the bank. Dam/restricted water always off-limits. Cube Hydro Yadkin public recreation banks and ramp shoulders where bank fishing is posted — fees and gate hours verify live. Fish first light and last light ET on points, riprap, weed edges, and creek-mouth seams. Riprap and public docks only; squarebills on stain. Soft weekday recreational unless Heavy Traffic names an event. Give other bank anglers room on short shoulders. Pack a rain shell when midweek cells are in the forecast; never invent boat counts.

KAYAK

High Rock Lake kayak plan: launch at public ramps with kayak-friendly shoulders; work lee shores when main-lake or open-fetch wind rises. PFD on — whistle recommended on big water. Stay out of dam restricted zones; soft plastics keep bass in the zone without long casts into timber. Soft plastics, jigs, and compact swimbaits keep fish in the strike zone without long casts into timber or rocks. Leave a weather margin midweek; do not paddle open water into cells. Soft recreational — still yield in narrow cuts.

BOAT

Plan: first light—~9 AM ET shallow points / riprap / creek mouths; midday graph bait on breaks and channel swings; evening revisit shade or wind seams. Idle clear of blast-off lanes if a club event appears. Re-check operator lake / generation boards before launch — no invented unit counts. Soft recreational unless Heavy Traffic says otherwise. Trailer first for lightning. Lead the day for the primary species named above — water-first, not a national paste.

● LURE BOX

Lead the box for **Largemouth bass (stripers also in mix)**. Stained water: louder / chartreuse profiles. Clearer: natural shad / green pumpkin.

TOP

Walking bait / popper at dawn

Buzzbait on cloudy storm edges

Whopper-style over grass if present

MID

Spinnerbait / chatterbait if stained

Squarebill on riprap

Swimbait / underspin on bait

BOTTOM

Jig / soft craw

Texas-rig worm

Ned on clearer banks

● BASS LIFE STAGE

Primary species this week: Largemouth bass (stripers also in mix) — water-first.

Bass life stage (late Sep — seasonal, not a dated creel survey): Early fall transition. Surface temps typically start easing after summer peaks; fish begin relating more to baitfish (threadfin/gizzard shad) moving toward creek arms/points at first cool snaps. Still some summer ledge/main-lake holdovers on deep reservoirs until sustained cool nights. If thin local reports: say so and fish the transition playbook (shad-imitating reaction baits + morning topwater). What's on the menu: Most likely threadfin/gizzard shad + bluegill/sunfish on banks; crawfish still a secondary. Thin on dated forage reports this pass — label as seasonal most-likely, not a verified hatch.

What's on the menu: Most likely young-of-year baitfish and lake-typical forage (shad / herring / perch / bluegill analogs by water). Thin on dated 2026 stomach-content reports this pass — seasonal most-likely only. Match lure size to the bait you see.

Life-stage language is seasonal, not a creel survey. If fish are locked deep on bait, follow electronics; if they are chasing on top at first light, stay shallow until the sun climbs.

● ALSO HOT / ALSO IN SEASON

Secondary chase on High Rock Lake: Crappie; catfish; striped bass/hybrids on shad. (Regs: live-link NCWRC only — do not invent.)

Crowd / Heavy Traffic: In Cast window: No High Rock named trail event pulled for Sep 21–24, 2026. Looking ahead: FOM Piedmont 2026 list showed High Rock dates earlier in season; no Sep 21–Oct mid High Rock event confirmed this pass. Sources checked: FOM NC Piedmont allevents · ncbassfishing.com Never invent boat counts. Soft recreational still means give rentals, pontoons, and bank anglers room.

Primary reminder: Lead the week for Largemouth bass (stripers also in mix) — water-first, not a national paste. Regs live-link only (state wildlife agency creel & size limits). Reciprocal / border waters: confirm live; do not invent sister-state rules.

Looking ahead (next 1–3 weeks): Cube levels already several feet down — watch for further LIP effects if dry. Cooler evenings favor fall transition. Watch for bait pushes into creek backs and less reliance on pure midday heat as nights ease. Keep pulling live elevations / lake pages. Next Cast product: Friday window Fri–Sun (ET).

Panfish and catfish remain seasonal options where the lake supports them — early-fall brush and deeper channel swings on warm nights early-week. White bass / hybrids (where present) often show on wind or current seams when bait compresses. Smallmouth (where the lake holds them) reward clean rock and current edges when wind sets up. If a club or permitted tournament appears on a look-ahead calendar, treat ramp density as Heavy Traffic even when the species focus is walleye or multi-species — boat wakes and blast-off lanes still matter.

Weather look-ahead stays subordinate to the live NWS point forecast: cooler mornings widen the bite window; post-storm mudlines can fire then shut off. Pack a rain shell when midweek storms are in the forecast. Hydrate early-week heat. Clarity, boat traffic, and bait location will tell you more at the ramp than any Sunday scaffold — use this Cast as a plan, not a guarantee.

● ETHANOL-FREE FUEL NEAR THIS WATER

Current **E0** (ethanol-free) identity from Pure-Gas.org as of the Sunday research pull (ET). Prices may change; verify octane and price at the pump. Call ahead — availability changes.

- **E0** — 2.8 mi — Southmont Grocery (UNBRANDED), 10411 Hwy 8, Lexington NC — listed E0 octane(s): 87, 93; tel 336-798-4441 [Pure-Gas id 1810]
- **E0** — 3.0 mi — High Rock Grocery (MARATHON), 10259 Hwy 8, Lexington NC — listed E0 octane(s): 89; tel 336-798-5080 [Pure-Gas id 16286]

- **E0** — 3.5 mi — Tamarac Marina (UNBRANDED), 9120 Bringle Ferry Rd, Salisbury NC — listed E0 octane(s): 93; tel 704-636-1918 [Pure-Gas id 4352]
- **E0** — 4.2 mi — Hill's Minnow Farm (CITGO), 7940 Bringle Ferry Rd, Salisbury NC — listed E0 octane(s): 90; tel 704-633-7413 [Pure-Gas id 8562]

Listed **E0** only. Crowdsourced Pure-Gas listings — not a pump guarantee.

● **HEAVY TRAFFIC**

In Cast window: No High Rock named trail event pulled for Sep 21–24, 2026. Looking ahead: FOM Piedmont 2026 list showed High Rock dates earlier in season; no Sep 21–Oct mid High Rock event confirmed this pass. Sources checked: FOM NC Piedmont allevents · ncbassfishing.com

● LOOKING AHEAD

Cube levels already several feet down — watch for further LIP effects if dry. Cooler evenings favor fall transition.

Next Cast: Friday window Fri–Sun. Keep pulling live lake pages and trail calendars 1–3 weeks out.

● RAMP-TO-DARK CHECKLIST

- **Boards:** Re-pull operator lake / district pages the evening before and again at the ramp — Sunday research ages fast.
- **Sky:** Live NWS point forecast + radar; lightning means trailer first, every time.
- **Fuel:** Confirm **E0** still on the Pure-Gas listing and price at the pump — no invented prices.
- **Crowd:** Soft recreational still yields to rentals, pontoons, and bank anglers; named Heavy Traffic overrides the soft call.
- **Species:** Lead the day for the primary named above — water-first, not a national paste.
- **Exit:** Leave a weather margin on storm days; do not fish restricted dam water.

● FOUR-DAY FISHING PLAN

Use this as a Mon–Thu working script, then adjust to live boards and sky:

- **Monday:** First light on windward points and riprap; midday graph bait on breaks; evening revisit shallow shade. Soft recreational opener.
- **Tuesday:** If wind builds, fish mudlines and lee pockets rather than fighting whitecaps. Keep a storm abort plan if NWS cells are active.
- **Wednesday:** Often the unsettled day — shorter morning window, then trailer before storms. Post-cell mudlines can fire briefly; lightning still ends the day.
- **Thursday:** Clean-up day when skies improve — widen the morning window, cover water thoroughly, and note any look-ahead Heavy Traffic for the weekend.

Primary species leads every day — do not force a national bass paste on a water-first primary. Re-check operator pages and Pure-Gas **E0** before you trailer.
